

**IN THE SPECIFICATION**

Please replace paragraph [0006] of the original specification with the following replacement paragraph.

--[0006] In one general aspect, a powder driven tool includes a housing including a powder cartridge and piston ~~piten~~ within a barrel. A guide member attaches to the barrel and cradles a support device. The guide member includes a wall portion having a thickness greater than other portions of the guide member. Ignition of the powder cartridge causes the piston to move within the barrel and drive the support device. The wall portion resists barrel climb as the support device is driven into an object.--

Please replace paragraph [0020] of the original specification with the following replacement paragraph.

--[0020] In one embodiment, the powder driver 20 includes a housing 21, a powder cartridge (powder load) 22, and a trigger 23 for actuating a piston 24 within a barrel 25. As shown, the powder ~~power~~ driver 20 also includes a guide member 26 fitted to the end of the barrel 25 for cradling a support device 10. In this embodiment, threads are used to fit the guide member 26 to the barrel 25.--
